Universal F.S.

ONE STEP FOUNTAIN SOLUTION

FOR USE ON METAL, PAPER, or POLYESTER PLATES

ITEM NUMBER S-1809

Have you been struggling to find that single solution that allows you to alternate between polyester and metal plates? How about using one fountain solution for all your plate applications?

Gans' Universal F.S. is a one-step fountain solution specifically designed for a wide variety of printing plates as well as the latest in CTP plate technology. This product was formulated to perform on silvermaster, metal, and paper plates.

Consolidate your pressroom supplies with this one-step today!

With excellent wetting agents, Gans' *Universal F.S.* will keep the non image area of your plate wet, thus allowing tight screens or reverses to remain open on the most difficult of any non-grained, polyester printing plates. Polyester printing plates do not require strong amounts of desensitizing, but rather a consistent amount of wetting to ultimately wash ink away from the non-image area of the plate, keeping screens and reverses open.

KEY BENEFITS

- Compatible with all CTP printing plates (Metal, Silvermaster, or Paper).
- Prevents plate blinding and picture framing.
- Will not allow fungus growth.
- Improved ink and water balance for faster makereadys!
- Compatible with Oil, Rubber, or Acrylic Based inks.

DIRECTIONS FOR USE

The recommended dosage for this product is **4 - 6 oz. per gallon**. Based on press condition and dampening system or plates, an additional ounce may be required to achieve desired results.

Specific Ph / Conductivity Ranges:

The desired starting conductivity for this product is 750 mmho's over water. This product carries a conductivity of 150 mmho's per ounce, over water.

The diluted pH should be in the range of 5.1 using reverse osmosis water.
