GANS MRC
METERING ROLLER CLEANER
ITEM NUMBER S-1643

Gans **MRC** is a fast drying, solvent blend formulated to clean Inks from metering rollers in all continuous dampening systems. Other conventional MRC formulas can leave a residue on the rubber and or chrome roller surface, causing them to attract ink instead of water and thereby interfering with their function.

Gans MRC's concentrated formulation will clean your metering roller FASTER than the competition, WITHOUT contaminating your fountain or attacking your plates!

Gans **MRC** will remove gum glaze and evaporate quickly, ensuring that there is no contamination within the dampening system or of the fountain solution. Gans **MRC** does not contain any methylene chloride, which can increase disposal costs and is a known carcinogen.

KEY BENEFITS

- Non-photo chemically reactive.
- **Fastest** evaporation rate available today!
- Aggressive ink cutting formulation.
- Does not contain Toluene, Xylene, or other chlorinated solvents.
- Available in Gallons, 5 Gallons, and 55 Gallons

DIRECTIONS FOR USE

Disengage the metering roller from contact with the other rollers and wipe clean with a Gans **MRC** saturated cloth. Rollers with excess ink build-up or embedded ink pigments in the pores of the rubber may require an additional cleaning.

Metering Rollers should be cleaned at the end of the working shift or whenever a build up of ink appears to be present. This will ensure that the rubber or chrome rollers in the dampening system are **water** receptive rather than ink receptive.
