

GANS M.R.C. – S.C.

Item Code S-1645

RULE 1171 COMPLIANT METERING ROLLER CLEANER
Available in Gallon, 5 Gallon, and 55 Gallons

As the South Coast Air Quality Management District has recently adopted the regulation restrictions against clean-up solvents, metering roller cleaners, and plate cleaners, this product was formulated with both performance and compliance in mind. Clean-up solvents, metering roller cleaners, and plate cleaners must all be 100 grams per liter or less to be environmentally compliant for 2008.

Gans M.R.C. – S.C. is an effective ink cutting, fast drying metering roller cleaner that has been formulated with the finest of raw materials. This product was designed to remove deep ingrained ink, gum glaze, and other soiled materials from within the pores of the metering rollers that might otherwise cause them to become hard and non water receptive.

Other “Low V.O.C.” metering roller cleaners that are commercially available have been known to have extremely delayed dry times which ultimately feed back into the water pans, contaminating and destroying the critical active ingredients within working fountain solution. This **is not** the case with **Gans M.R.C. – S.C.**

Be Compliant, Buy Compliant!

ADANTAGES

- Strong ink cutting
- Extremely fast drying virtually eliminating any chemical feedback into the fountain solution
- Increases water receptivity of metering rollers after every clean
- Reduced V.O.C. levels (88.4 Grams per liter – SCAQMD Compliant)
- Free of methylene chloride (a suspect cancer causing chemical)

DIRECTIONS FOR USE

Pour M.R.C. – S.C. onto a clean rag or shop towel, wipe back and forth over the entire length and circumference of the metering roller until all ink and residues have been removed. Repeat the process as needed until the metering roller is clean.
