## AERO SET 4-COLOR PROCESS INKS

Ink Number	Description	Tack
A130352	Aero Set Process Black	14.0
A130353	Aero Set Process Cyan	13.5
A130354	Aero Set Process Magenta*	12.5
A130355	Aero Set Process Yellow	10.5

This is a blue shade Magenta to match those of Pacific rim 4-color sets.

An alternate closer to the SWOP standard, A130354Y, is also available.

Tack readings are @ 1200 RPM, 1 minute 90° Fahrenheit, on a Thwing Albert 101 Inkometer.

**Application** Aero Set works well on both small and large format multi-station presses. These ultra-quick setting process inks are optimized for presses equipped with in-line coating units. Aero Set is the perfect 4-color process set for the requirements of work-and-turn/tumble jobs.

### Features & Benefits

**Set Speed** Aero Set process inks are among the fastest, 4-color sets available in today's market. If set-speed is of primary importance, Aero Set is the series you have been seeking. They perform exceptionally well on CIS & C2S paper.

**Stay-Open** With Aero Set, stay-open has not been sacrificed. Under favorable ambient conditions, Aero Set will not skin for 7 to 10 days in the can or on press, thereby minimizing waste.

**Post Processing** This is a finishing friendly process set, but pre-testing is recommended for each application, especially laser imprinting. Very alkaline coatings such as Krystal Kote, must also be pre-tested for the possibility that the magenta pigment will bleed.

Coatable, Aqueous	Coatable, UV	Fade Resistance, Black	Fade Resistance, Cyan	Fade Resistance, Magenta	Fade Resistance, Yellow	Foil & Emboss	Gloss	Laser Imprinting	Scuff Resistance	Set Speed	Stay-Open	Fine Screens	Stock, Coated	Stock, Non-Porous	Stock, Uncoated	Stable on Rollers, Blankets
