

Drône Dull Overprint Varnish (A111000)

Drône dull overprint varnish, #A111000, has been developed with “new age technology” materials which provide the ultimate in matte appearance. Drône is equally suitable for wet-on-wet or wet-on-dry overprinting.

Providing very quick setting, especially when compared to other matte overprint varnishes, Drône maintains excellent blanket and roller stability. While wax-free, Drône nevertheless dries to a slick, hard finish.

Drône offers the following properties:

- ❖ Finishing Friendly for foil stamping and subsequent imprinting.
- ❖ Excellent non-yellowing properties.
- ❖ Good burnish resistance.
- ❖ Very low misting.

Drône’s advanced formulation also permits its use in place of tint base to produce dull-tinted inks, i.e. those with less than 10-15% colorant. Drône offers the appearance of a milky tint base when compared to previous dull overprint varnishes, yet is still transparent for overprinting existing copy.

Tack: 9.0-10.0 (1200 rpm @ 1 minute 90° F T.A. Inkometer)
Viscosity: Medium to Heavy Body
Stability: +0.6 units/6 minutes
